The Complex Circulatory System (God's Wondrous Machine)

Synopsis

DISCOVER YOUR DESIGN! Developed by a pediatrician, this book focuses on the amazing design and functionality of the human body's circulatory system. You will discover amazing facts like: The human heart beats 100,000 times a day, and one drop of blood has 5 million red blood cells in it. A timeline of important discoveries and innovators as well as key anatomical terms and concepts. Discussions of disease and proper care for optimal health! The third book in the popular elementary anatomy series *God's Wondrous Machine*, focuses on the heart, blood, and blood vessels that make up the body's circulatory system. Understanding the mechanics of this system in transporting nutrients, blood, chemicals, and more to cells within the body is key to understanding how it helps fight disease as well as maintain a properly balanced temperature. Readers learn how the deliberate design of their bodies enables it to function as it should, just as God meant for it to.

Customer Reviews

Dr. Lainna Callentine, MEd, MD, is a physician, adjunct professor at Wheaton College, writer, speaker, and creator of Sciexperience, as well as a missionary doctor that serves the uninsured. She affirms the motto from Galatians 5:13, "serving one another in love" and left formal medicine in the E.R. to homeschool her children and pursue her passion in teaching.

We are using all 3 of these books as unit studies for science, history, health, civics, bible, spelling and vocabulary. These are well written and are coming from a biblical perspective, which I greatly

appreciate. My children enjoyed learning from these books, and we all appreciated the full color beautiful photos too.

What a fantastic book! It is right on target for the stated grades 4-6 however my 1st grader also loves this book and is able to follow and understand the content. My husband is a physician and myself a nurse so our house breathes science as it is our passion. In saying that we own multiple books geared for our kids on the topic of science especially anatomy and physiology. This book and the other two in the series are by far our favorite books for teaching our kids.

The information is good but sorely lacking in detail. Unfortunately, I did not read the fine print. It is 80 pages and meant for grades 4-6. If you want detailed scientific information on the circulatory system this book is not for you. Be aware that her other books although listed as 269+ pages they are also only ~80 pages. In my estimation at \$9.95 for the Kindle versions of these books, they are overpriced. I want a refund.
