Fixed Restorative Techniques (Dental Laboratory Technology Manuals)

Synopsis

This volume is designed to help train students in the procedures required to make fixed restorations. The authors have endeavored to eliminate individual idiosyncrasies and to present a complete, clear description of laboratory procedures for crown and bridge.

Customer Reviews

A revised and expanded edition of a successful manual, Fixed Restorative Techniques provides a thorough explanation of current laboratory methods. It furnished basic information about both the rational and techniques for development of inlays, onlays, and conventional gold alloy crowns and bridges. In addition, the authors present the fundamental rationale for contour and especially for occlusion.

Dental techniques described are not contemporary. They are mostly history, dealing with procedures involving gold alloys and polymer veneers (described even with flask technique. No trace of dental ceramics.
